

NPT 210  
AUTO DRY BATH  
**EXCLUSIVE**

**NEW**

 **NORMALAB**

## NPN TECH Penetrometer

The NPN TECH is the third-generation automatic penetrometer manufactured by NORMALAB. This rugged instrument has been designed for a maximum usability and easy operation in various types of environments.

Our fully automatic and digital NPN TECH penetrometer allows easy connection to computer, printer or keyboard through universal USB technology. It offers various options such as the automatic approach for conductive samples and an automatic detection of the bitumen surface.

To maintain sample temperature during the analysis, NORMALAB proposes a brand **new accessory** : the automatic dry bath "NPT 210" which **cools** and **heats** samples of various sizes between 5 and 80°C. Besides its excellent homogeneity and stability, it provides highly accurate measurements.
